u3a SiteWorks WordPress configuration	1.1.0		

[§]Third Party Software Plug-ins, version numbers outside the control of SiteWorks

[†]Should not be activated, see Known Defects or Limitation

Summary of Defects Resolved

Plugin	Reason
Import Export	The new version supports the import and export of (i) the new group metadata fields start time and end time, (ii) the new event metadata field end time and (iii) multiple group categories. This is supported by a revised spreadsheet and instructions (Reference #688 & #1024).
	Explanatory Note: Core plugin release 1.1.0 allows multiple categories (or faculties) to be assigned to a single group. Where multiple categories are used, the exported CSV file will include all assigned categories in a single entry with category titles separated using the vertical bar character '|'. So for a group which has the group categories 'History' and 'Virtual' set the Category field in the export file will show 'History|Virtual'. A CSV file for import can use the same mechanism to specify multiple categories. Any number of valid categories may be given.

Known Defects or Limitations

LiteSpeed Cache: This is an ongoing issue, currently the plugin should not be activated. Detailed in OpenProject #972, Change Board Minute 11.

Release Dated: <u>27 May 2024</u>
