SiteWorks: Release Note

Core 1.1.4

28 August 2024

Updated 16 September 2024

Update to the Core plugin to rectify an issue that appeared as a consequence of the update to the core resolve OpenProject 1062.

Summary for Website Administrators: The 1.1.4 version of the core plugin resolves a bug in the event listing that resulted from the 1.1.3 update. It should be noted that this will impact only a very small number of u3as, due to the combination of settings that will trigger the issue.

Updated 16/09/24 to correct error with Core version number

New Features, Enhancements or Bug Fixes.

Plugin	Summary of Reason
Core	# 1068. Bug fix: Associated with [u3aeventlist cat="Other"], as only a handful of sites are affected by the specific combination of settings that triggered this issue, which is why it was not picked up during testing 1.1.3 prior to release. As the solution involves database modification which is an inherently risky process, so the coding team have built in additional safeguards to detect any anomalies in the update process including generation of notifications to the system administrator should any manual correction be required.

Known Defects or Limitations

LiteSpeed Cache: This is an ongoing issue, currently the plugin should not be activated. Detailed in OpenProject #972, Change Board Minute 11.
